Autodesk Showcase is a powerful and easy-to-use presentation software solution that enables you to create sophisticated 3D presentations for your AutoCAD designs. The solution packs a massive support for multiple file formats and many templates, thus enabling you to find the perfect look for your work. Key features: Powerful and easy to use presentation software Supports multiple file formats Fully integrated A3S support Support for multiple visual styles Multiple template support Collaborative presentation and support Export support for common file formats The design of the interface is clean, and it is very easy to navigate. The presentation pane enables you to import and export scenes. The solution provides an adequate set of options which enable you to adjust the background, lighting, shadows and brightness level, add a cinematic or still shot and play, stop and pause the selected slide. Autodesk Showcase is available for Windows and macOS (both 64-bit and 32-bit). It has a size of 7.1 MB. Our verdict: Autodesk Showcase is a complex and powerful presentation software. While the UI is not as user-friendly as other products of its kind, the features at your disposal are vast and include many options, more templates, and a solid integration with A3S. Moreover, the solution is compatible with various file formats. If you look at its technical requirements, it stands out among its competitors as it supports multiple file formats, and it has a large memory footprint. You can get the full version for \$79.99. What is new in version 4.2.7 (build 750)? You can now add a video file as a background for your presentation, and the game play controls are enhanced. What's more, the update provides a new option that makes it possible to share presentations via email. The minor enhancements listed below are included: Added the option to include a video file as a background in a presentation. The game controls are now easier to navigate. Added the option to share a presentation via email. What is new in version 4.2.6 (build 683)? The updates included in version 4.2.6 (build 683) are as follows: Enhancements: • Fixed an issue that prevented export to file extensions such as CR2, CRW, RAW, ORF, and ORF2 • Fixed an issue that caused the axis to get

Customer Reviews I received this software a few weeks ago and I have to say that it is not bad at all, I am a power user and this program is pretty similar to some of the work I have done before. The only reason I am writing this review is because I do not really know where else to place the review. When I started, I opened up the program and got it running, imported the CAD file and started to make my presentation, and I had a problem. With a PSD file you can easily change colors, or the background and move the slide with the WASD keys. When I tried to do this with the file that was created in the program, I was unable to do this. The file was created with DWG file format, which I use when doing AutoCAD work. The program is easy to use and it is relatively easy to figure out how to use the program. The biggest problem I have with the software is when I made the presentation and went to run it, the presentation locked up and I could not even save the presentation. This problem had to do with the file that was created, I had to open the file and change the file format to a PDF file. It works good now but I do not know what was wrong with it. I have tried to use the program more than once, and I do not know what I did wrong. Anyway, I have to give the program a 9 out of 10 for performance and stability.
